Preparation is half the battle in most resurfacing projects. Skimp on prep and you might just be called back to redo the work. Our PolyClean Tub & Tile Cleaner arms you with a top-notch weapon. This remarkably effective phosphoric acid-based detergent emulsifies dirt to remove grease, oil, mold, rust and hard water deposits, and even stubborn soap scum when cleaning the area before etching. It is safe to use on most any surface. When used properly, this cleaner can also assist in removing surface contaminants from porcelain, steel, tile, Formica, fiberglass, plastic and marble surfaces.

APPLICATION: Since it contains strong acids in its formulation, it's imperative that you use the proper PPE (Personal Protective Equipment) when using PolyClean. When applying the PolyClean Tub & Tile Cleaner, wet the surface of the bathtub (or other porcelain or ceramic surface) with water. Pour 3 to 4 ounces of PolyClean in the center of the bathtub. Scrub the entire surface with a 3M scrub pad or work sponge. Give the surface a good scrubbing between 3 to 5 minutes, then rinse with cool water. Dry the tub with a towel and make sure the surface is clean and free of soap scum or other contaminants before proceeding. The NAPCO PolyClean does not need to be mixed; it is ready to use right out of the container. Protect from moisture. Protect from freezing. Protect from direct sunlight. Keep in a dry, cool and well-ventilated place. Keep away from heat. Store locked up and out of the reach of children.
